

HMC: Proudly announces Imtech Marine Germany as our agent

Press release: 4 February 2014

“Imtech Marine Germany has exceptional capabilities in the maritime industry and we are looking forward to a successful cooperation”

As part of our vision to provide the worldwide industry with an even better service, we are proud to introduce Imtech Marine Germany as our new representative in Germany.

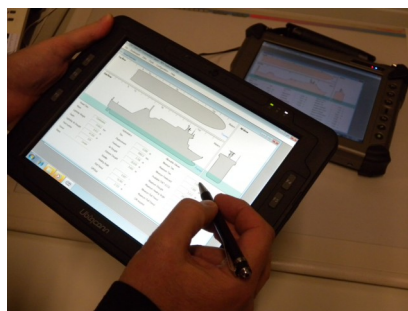

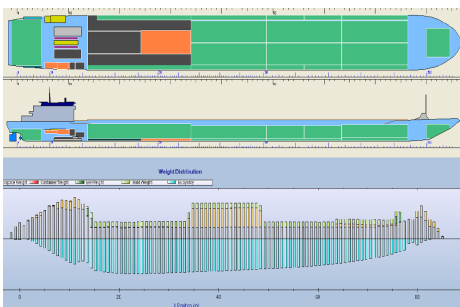

Imtech Marine is a leading company in the global maritime market, operating as a full-service provider and system integrator of custom made, innovative and sustainable technology solutions covering the whole ship. “Their strong knowledge of the maritime industry makes them the perfect choice as our agency partner.” says Stephan Lucas, Project Manager of HMC.

Since the last ten years, HMC gained a lot of knowledge on hydrodynamics and hydromechanics. This knowledge has led to several own developed products to assist companies in the maritime industry.

HMC's CPC 2.0 is the solution for class approved loading operations. The Cargo Planning & loading Computer combines all crucial stability- and strength parameters with an efficient and user-friendly interface. Examples of modules are the ship to shore data transfer to achieve the maximum integration between the ship and the office. This ensures 24/7 safety and stability records to meet the increasing quality standards. Supported by the handheld module which can be automatically integrated with the main loading system on the bridge, to provide the captain of the vessel with the latest stability information to assist him in times of calamity.

For more information about our CPC 2.0 loading instrument or any other products or services, please contact our office.
